

Book of the Month

About the Book

Joni Seager provides an accessible book of infographics that aim to analyse up-to-the-minute global data on the key issues facing women today. These include topics such as motherhood, violence, work, education, health, changing households, lesbian rights, and more. It is easily accessible for teachers, high ability KS3/4 groups and A Level classes. It takes the eye some training as the graphics are so packed full of information but the book is a wonderful guide to women's issues globally.

'Geographer Joni Seager has done it again - produced an up-to-date and revised atlas on how women are living today across continents and cultures. We highly recommended her first edition, and this new book is also a real treat for teachers seeking visual ways to alert students to various issues impacting the world's women. The colorful maps, illustrations and charts can be used alone, depending on the subject matter being discussed. Most use a starting point of 2000, ending at 2018 to track gendered issues of equality, literacy, technology, work, domestic violence, sexual assaults, rights, government and power, motherhood, on and on. The emphasis on women's health and the impact of environment and climate change on women is welcome. Positive change is not neglected as are subjects that might be of special interest to teens, such as the business of beauty and women in sports. All and all, a highly valuable resource for student and teacher study.

Possible Ways to Incorporate the Book into your Practice.

- Use the infographics as stand-alone starters/plenaries or source practice.
- In topics such as:
 - o Health
 - o Education
 - o Place
 - o Development – Sustainable development goals
 - o Globalization
 - o Migration
 - o Gender equality
- An entire unit could be made from this book!
